TITLE : Catalytic Hydrogenation of Cracked Petroleum Distillates of Hungarian Origin

ORIG. PUB. : Acta chim. Acad. scient. hung., 1958, 16, No 2, 193-204

ABSTRACT : Description of experiments on catalytic hydrogenation of cracking distillates of "Nad'lend'yel'skaya" petroleum in rotating autoclaves (4.5 liters), with the view of obtaining quality motor fuels. The starting raw material (18)-363° fraction,  $d_{15}^0$  0.878, S 2.3%) was hydrogenated at 380, 400, 420, 440°, at pressures from 5 to 100 atm in the presence of catalysts. It was found that at optimal temperature (420°) in the presence of cobalt molybdate (I), at 25 atm, 90% of sulfur compounds are removed. At 15 atm desulfurization reaches 83.3%, at 75 atm 95.4%. Catalyst  $WS_2 + NiS + Al_2O_3$  yielded results analogous to I. On introduction into the reaction space of Mo, W, Fe, and Ni, in

ABSTRACT : the form of oxides, considerably better results were obtained than on using corresponding sulfides. Exploratory experiments were also conducted on desulfurization of cracking gasoline ( $d_{15}^{\circ}$  0.7539, S 0.63%, of which 0.40% are aromatic sulfides). It was found that at 420° over  $WS_2$ -catalyst, 25 atm are sufficient, and over I -- 35 atm, to decrease S-content to 0.01%. It is assumed that in a continuous process the same effect will be attained at a still lower pressure. -- S. Rozenfel'd.

Solid-state copolymerization of N-vinylsuccinimide and N-vinylpyrrolidone  
(copolymerization in solid and supercooled eutectics)

SOURCE: Magyar kemiai folyoirat, v. 71, no. 4, 1965, 171-175

TOPIC TAGS: copolymerization, solid state, radiation polymerization, supercooling,  
heterocyclic base compound

ABSTRACT: The eutectic mixture of the ingredients studied is 3.4 imide:  
6.6 pyrrolidone. Copolymerization progressed at maximum rate with the  
components in this ratio and at a higher rate in a supercooled eutectic  
than in a solid eutectic. The theoretical and experimental aspects of  
the polymerization, and the characteristics of the copolymers, were  
described in detail. Orig. art. has: 10 figures. [JPRS]

TITLE: Studies in the field of solid-state radiation polymerization. Part 6: Gamma-radiation-induced solid-state polymerization of vinyl laurate

SOURCE: Magyar kemiai folyoirat, v. 71, no. 4, 1965, 175-178

TOPIC TAGS: solid state, radiation polymerization, gamma radiation, monomer

ABSTRACT: Maximum polymerization rate was observed when the monomer's temperature was near the melting point, + 3°C. The mobility of the molecules of vinyl laurate at this temperature was considered to be relatively high. The polymerization reaction was investigated under various operational parameters and in the presence of various compounds. The results were presented and discussed in detail. TITLE: Investigations in the field of solid-phase radiation polymerization. Part 13:  
Inhibition of solid-phase polymerization

SOURCE: Magyar kemiai folyoirat, no. 2, 1966, 74-77

TOPIC TAGS: radiation polymerization, vinyl compound, reaction rate

ABSTRACT: Tests on gamma-radiation-initiated solid-phase polymerization of N-vinylsuccinimide and benzoquinone and N-vinylsuccinimide and phthalic anhydride showed that by increasing the ratio of the benzoquinone or the phthalic anhydride in the reaction mixture, eventually the reaction rate decreases considerably. This phenomenon was attributed to the inhibitory effect of a fine-structured layer forming on the surface of the reacting components in the monomer form. The mechanism involved was investigated and the presence of the inhibitory layer was verified. Orig. art. has: 6 figures. [JPRS: 34,805]

TITLE: Determination of the frequencies of wakes shedding from circular cylinders

SOURCE: Acta technica academiae scientiarum Hungaricae, v. 53, no. 1-2, 1966, 91-108

TOPIC TAGS: Reynolds number, cavitation, vortex flow

ABSTRACT: [English article] The frequencies of wakes shedding from a circular cylinder placed in a water flow with values above the critical Reynolds number were determined as function of various parameters. At and above the critical Reynolds number the Strouhal number is a function of the cavitation number, and there is evidence of regular vortex generation in this region. In cavitating flow, with a given cavitation number, the drag coefficient has a constant value, independent of the value of the Reynolds number. Orig. art. has: 19 figures, 8 formulae and 2 tables. TITLE: Studies in the field of solid-state radiation polymerization. Part 7:  
 Effect of polymer formation on the kinetics of solid-phase polymerization 19.44.55

SOURCE: Magyar kemiai folyoirat, v. 71, no. 6, 1965, 251-254 19.44.55

TOPIC TAGS: radiation polymerization, polymerization kinetics, polymer, solid state, monomer

ABSTRACT: [Authors' English summary, modified] The effect of the formed polymer was studied in monomer-polymer systems during radiation-induced solid-state polymerization, on the kinetics of the solid-state polymerization of N-vinylsuccinimide. The formed polymer accelerated the polymerization, owing to deformations in the crystal lattice (partly decomposed crystal structure) and by the increased mobility of the monomer molecules caused by the polymer formed. This effect is likely to occur in the case of monomers that are of accelerating character in solid-state polymerization. The reverse effect is likely to occur in the case of monomers that are of decelerating character. Orig. art. has: 3 graphs, 1 table.

TOPIC TAGS: corrosion, cavitation

ABSTRACT: This article is the Hungarian publication of an article published in  
Zh. Prikl. Mekh. i Tekh. Fiz. AN USSR, 1963, no. 3, pp. 122-129. The methodologies  
employed at the authors' Institutes for the investigation of the scale effect  
were described. This investigation covers the subject on the basis of an energetical  
parameters. The equipment used and the experimental conditions employed were  
discussed and an evaluation of the work is made. Orig. art. has: 11 figures,
